v03 matched flight-fit intervention: estimation changes approach, not only the final estimate
Ours baseline (failure)
Ours + flight fit (success)
V2E baseline (success)
V2E + flight fit (failure)
Precontact position estimates
3D position error (mm)
Simulation time (s)
Precontact velocity estimates
3D velocity error (m/s)
Simulation time (s)
Approach alignment
Actual ball minus hand: world X (mm)
Simulation time (s)
Physical approach / contact geometry
Actual ball-to-hand reference distance (mm)
Simulation time (s)
Shaded interval: first control step with real hand contact (1.28-1.32 s). X: early native termination.
GT/contact are offline scores only; reference point is link6, not a collision surface. All four runs retained.
